

F1 & MOTO GP Engineering

Content

- **Introduction to Race Engineering**
 - Race engineering Means & Purpose
 - Race Vehicle general Properties & Appearances
- **Race Terminology**
 - Terms used during Race
 - Terms used in Pit stops
 - Scientific terms to be used to understand further technical topics
- **Capabilities of Sport vehicles**
 - Acceleration capability
 - Retardation capability
 - Cornering Capability
 - Leaning Capability
- **Strength of Race vehicle components**
 - Body of F1 Car & Fairing of Moto GP Bike
 - Tires of both
 - Rims Brakes
 - Engine Power
 - Special Features

- **Aerodynamics of Race Vehicles**
 - Aerodynamic Introduction & Terminology
 - Advantages & Disadvantage on AD
 - Application in Race Vehicle
 - Evolution of Race Vehicle design
- **Performance parameters of Race Vehicles**
 - Engine Power, Torque, RPM, Cylinder Capacity
 - Power to weight ratio
 - Maneuverability
 - Special Parts & Engineering behind this super extraordinary performance
- **Vehicle Dynamics**
 - Forces faced by vehicle while acceleration, retardation and cornering
 - Effect of these forces on traction of vehicle
 - Design preferences according to these concepts
 - Special cases
- **Pit Stops**
 - Importance of pit stop
 - Pit Stop Team & Individual Task
 - Pit Stop Regulations
- **Forces on Driver**
 - Forces a Driver/Rider has to bear at the time of Acceleration, Retardation & Cornering
 - How to develop that strength
 - How to perform better
- **Modification Science**
 - How to enhance the capabilities of your general vehicles
